RoofStep 4-2 LD Rooftop Elevation Changes Safety System

FACTORY SUPPLY INC.
3412 49th Street North
Saint Petersburg, FL 33710

Designed To

The RoofStep line is designed specifically to allow workers/contractors to safely move over changes in elevation on rooftops including parapet walls. The RoofStep Ladder Series (LD) is a unique line of our RoofStep products which allows workers to move from one level of a roof to another and has guardrails on the upper sides in order to help prevent a fall from occurring to the lower level.

Installation

This system is designed to allow your employees a safe means of access to different roof levels, and comes engineered in a crate; most parts are pre-assembled with simple to follow instructions and a single tool for installation. This free-standing, portable, modular system is constructed with corrosion resistant lightweight aluminum tubing and utilizes counter weighted baseplates. With no rooftop penetration your roof will remain intact, so you will not have to worry about any unexpected leaks occurring from using this system.

Baseplates

Our unique, low-profile, stackable baseplates are designed to weigh only 40 lbs and are designed with a carry handle allowing for an easy, ergonomically friendly installation.

Technical Specifications

FACTORY SUPPLY INC.
3412 49th Street North
Saint Petersburg, FL 33710
