

RoofStep 5-5 XS Rooftop Elevation Changes Ladder

FACTORY SUPPLY INC.
3412 49th Street North
Saint Petersburg, FL 33710

Designed To

Allow contractors and employees to safely walk over parapet walls and other changes of elevation on your rooftop with this fall protection system. Designed specifically in order to allow for the safe movement of workers on your rooftop; the RoofStep Crossover Series (XS), is designed in order to enable your workers to be able to move up and over obstruction on similar roof levels, and have 45-degree bracing on both sides of the system in order to allow for stability.

Installation

These rooftop safety systems come engineered in a crate; most parts are pre-assembled with simple to follow instructions and a singular tool for installation. This free-standing, portable, modular system is constructed with corrosion resistant lightweight aluminum tubing and utilizes counter weighted baseplates. With no rooftop penetration your roof will remain intact, so you will not have to worry about any unexpected leaks occurring from using this system.

Baseplates

Our unique, low-profile, stackable baseplates are designed to weigh only 40 lbs and are designed with a carry handle allowing for an easy, ergonomically friendly installation.
