

Can Tumbler, 2-305-E1-50

Designed For

This can tumbler will help to save you time and money. This pail handling device is designed to mix one or two ordinary pails as opposed to using special containers or insertion mixers. Therefore, no messy clean-up or costly transfers are necessary when using this can tumbler which helps reduce the chance of spills and the hazards that become present when workers are exposed to these products.

Usage

To provide a through "corner-over-corner" mixing action, the can tumbler holds the pails at an angle to the horizontal rotating shaft. The adjustable bottom crossbar and screw-down top bar with locking handle quickly secure the can in the holder. This pail handling unit does not oscillate or shake heavy cans and its heavy-duty steel frame stands steady while tumbling.

Technical Specifications

FACTORY SUPPLY INC.
3412 49th Street North
